
Huawei Firmware Hg658b Checked

Huawei HG658b Login steps: launch a browser and go to the IP address. And even if the router has automatic updates, check from time to time to make sure it does. Alternatively, you can use your browser to log into the router and use the ipconfig /all command to find out its IP address. If you can do this, you know what you need to do. In this situation where there is only one device and you don't want to use the computer, you can disable the firewall or other filter. To do this, go to the "Router Status" menu and select "Advanced Settings". (We are using a Huawei HG658b router in the example.)
